Special-Interest Courses

Revised 2018
Special-Interest Course Description

**Special-Interest Courses**

Special-Interest Courses allow students to develop skills by doing tasks and activities in the target language. Rather than being based on academic content (like the Content-Based Instruction courses) or focused on a career (like Specific-Purposes courses), these courses are built around special interests (e.g., Spanish Service Learning, French Yoga, German Tabletop Games, Chinese Cinema, etc.)

These courses may be taught by anyone licensed to teach that specific language, with no additional licensure requirements. Course approval is not required to offer these courses. See the Course Code Management System for an updated list of available course codes.

These courses have no prerequisite; however, districts may choose to establish their own prerequisites. Classes can be developed as half-credit or one-credit courses, at the discretion of the district.

**Notes:**
1. The three standards within the communication strand are designated as interpretive, interpersonal, and presentational. These classifications refer to the three modes of communication recognized in the 2012 edition of the “Performance Descriptors for Language Learners” promulgated by the American Council on the Teaching of Foreign Languages (ACTFL).
2. These standards are based on the following documents, with permission:
The chart above is meant to guide educational stakeholders in identifying realistic expectations for proficiency benchmarks according to program length and type. Each pathway is broken into segments to show what a student might realistically expect from a given number of years in a program. This chart may also be used as guidance for placement in a language program and the setting of proficiency benchmarks; however, each stakeholder is encouraged to evaluate the needs and expectations of his or her own program. Many factors impact how well language learners acquire communication skills and how quickly they will reach different ranges of proficiency. These factors include instructional setting, authentic experiences, age and cognitive development, time on task, and motivation. Users of this chart may notice that the Novice proficiency level is narrow, the Intermediate proficiency level is wider, and the Advanced proficiency level is wider still. These differences represent the increased difficulty of linguistic production and of text types. The Superior proficiency level has not been expanded as this level is rarely achieved by K-12 learners. Programs that allow for more time on task should expect to have students reach higher levels of proficiency, although individual differences may affect proficiency outcomes. Heritage and native speakers generally possess higher aptitude in oral proficiency, but their reading and writing skills may not be as developed as their oral skills. Therefore, special courses should be designed to develop, maintain, and expand the language and literacy abilities of these students.

In general, those studying Chinese will progress through the proficiency levels at a slower rate, especially for reading and writing. The Foreign Service Institute (FSI) rates Chinese as a Category IV, which it describes as “languages which are exceptionally difficult for native English speakers.” By contrast, Spanish and French are Category I, and German is Category II.

Core Practices for World Language Students

The purpose of these Core Practices is to assist students in overcoming language acquisition challenges and achieving higher competence and clearer understanding as they pursue world language proficiency. Teachers are encouraged to post these Core Practices in a prominent place, to have ongoing and regular discussions with their students about them, and to teach and evaluate their students in a manner that is compatible with these student practices.

World Language learners are:

- willing to take risks, make mistakes, and persevere;
- willing to seek opportunities to use the target language outside of class;
- able to set realistic goals, self-assess, and reflect;
- resourceful and willing to collaborate within the classroom and beyond;
- open-minded, curious, and respectful of the target culture;
- consistently improving their language skills;
- engaged in the language-learning process.

New Options Course Descriptions:

**Content-Based Courses** are courses in which academic subject matter is taught through a target language, such that students learn academic content and language skills simultaneously.

These standards are designed for embedded courses; in other words, combining an academic course that already exists with a target language for dual credit in world language and a content area (e.g., Spanish Biology, French Art History).

**Special-Interest Courses** allow students to develop skills by doing tasks and activities in the target language. Rather than being based on academic content (like the Content-Based Instruction courses) or focused on a career (like Specific-Purposes courses), these courses are built around special interests (e.g., Spanish Service Learning, French Yoga, German Tabletop Games, Chinese Cinema).

**Specific-Purposes Courses** help students gain linguistic and cultural skills necessary in a specific career field (e.g., Spanish for Law Enforcement, Chinese for Business, ASL for Customer Service).
